Limit of Liability/Disclaimer of Warranty

While the publisher and author have used their best efforts in preparing this book, they make no representations or warranties, express or implied, towards the content of recipes and other information provided. We are not responsible for the outcome of any recipe you try from this book. You may not always have the same results we do due to variations in ingredients, humidity, altitude, cooking temperatures, typos, errors, omissions, or individual cooking abilities.

Please always use your best judgement when cooking with raw ingredients such as eggs and make sure you are not allergic to any of the ingredients. Use the right amounts and tools. It is the reader's responsibility to determine the value and quality of any recipe or instructions provided for food preparation and to determine the nutritional value if any, and safety of the preparation instructions. The recipes and other information presented are intended for entertainment and/or informational purposes and for use by persons having the appropriate technical skill, at their own discretion and risk.

This book provides approximate nutrition information for convenience and as a courtesy only. Nutrition data is gathered primarily from the USDA Food Composition Database, whenever available, or otherwise other online calculators. Nutrition information can vary for a recipe based on factors such as precision of measurements, brands, ingredient freshness, or the source of nutrition data. We strive to keep the information as accurate as possible but make no warranties regarding its accuracy. We encourage readers to make their own calculations based on the actual ingredients used in your recipe, using your preferred nutrition calculator.

The authors of the book are not dietitians or nutritionists. Any recommendations are made based on our research or personal experience, but shall not be construed as medical or nutritional advice. You are fully responsible for any actions you take and any consequences that occur as a result of anything you read in this book.

The book or content herein is not intended to cure, prevent, diagnose or treat any disease. Please consult your health care provider regarding any health-related decisions.

KITCHEN BASICS

KITCHEN BASICS

KITCHEN EQUIPMENT

A kitchen should have an assortment of equipment for at least basic functionality. Different people will prefer some equipment over others, and what some may perceive as indispensable may only be of convenience to others. The aim of this section is to give a generalised overview of kitchen equipment.

KNIVES

Knives are essential in food preparation to most people who cook almost everywhere in the world. However, it is important to know that there are numerous ways both primitive and modern ways to get around cooking without a knife. That aside, having a few knives for specific tasks will help a lot. Choosing which knives to buy can be difficult from the abundant choices. From different shapes, sizes, blade materials and handle materials, buying a knife that just feels right can be hard. Here's a quick look at some common knife shapes and their uses.

	Chef Knife	20-30 cm 8-12"	General purpose.
	Santoku Knife	13-20 cm 5-8"	Similar to Chef Knife, general purpose.
	Paring Knife	6-10 cm 2.5-4"	Small tasks, to peel and to core.
	Serrated Knife	20-25 cm 8-10"	Item with hard exterior and soft interior, such as bread.
	Cleaver	15 cm 6"	Tough edge, split bones, dense cartilage and thick meat.
	Chinese Chef Knife	18-22 cm 7-8.5"	General purpose.
	Boning Knife	12-15 cm 5-6"	Thin flexible blade, remove bones from meat.
	Filleting Knife	15-28 cm 6-11"	Very flexible, fillet and prepare fish.
	Carving Knife	20-38 cm 8-15"	Thinner than Chef Knife, cut slices of meat.

There are a variety of materials used to make knife's blade including carbon steel, stainless steel, ceramics, plastics among others. Blades made of steels are generally considered to be better as they can be sharpened easily using a sharpening stone or whetstone and honed using a honing rod. Dull blades can be frustrating to use and are dangerous as it can slip when failing to go cut through, resulting in injury.

KITCHEN BASICS

Similarly, handle materials should be chosen based on how safe they are. In general, handling a lot of greasy items or other slippery items, it is best to choose textured handles as they will provide more grip. For the average home cook, this should not be a common issue but nonetheless, is important to consider. Common handle materials include wood, micarta, and metal.

KNIFE ACCESSORIES

Cutting Board	Meat Fork	Honing Steel	Sharpening Stone/ Whetstone
			
Usually made of plastic or wood. Use damp towel to prevent slipping.	Used to hold meat when carving.	Used to straighten edge of knife, does not sharpen.	Sharpens edge of knife. Higher grit number, finer finish.

Avoid putting knives close to each other to prevent dulling. Instead, store knives in knife blocks, on magnetic strip or in knife roll.

COOKWARE AND BAKEWARE

Cookware and bakeware consist of a range of pans and other utensils. Before buying any pans, it is important to consider what kind of food it will be used for cooking, the number of people it will be used for cooking and the capacity of the stove and oven.

Similar to knives, cookware comes in different shapes, sizes, and materials. Cookware material is an important consideration as it has a drastic impact when cooking. A few of the most common materials used in cookware and their uses are highlighted below.

Aluminium	Relatively cheap, good heat conductor and lightweight.	Reactive and can be stained. Anodised type is more stable.
Stainless Steel	Good heat conductor, non-reactive and low maintenance.	Relatively expensive and uneven heating surface.
Carbon Steel	Relatively cheap, great heat conductor, non-stick after seasoning.	High maintenance and highly reactive with acidic foods.
Cast Iron	Great heat conductor and retainer. Oven safe.	High maintenance and highly reactive with acidic foods.
Copper	Great heat conductor and even heat retention.	Expensive, high maintenance and highly reactive.

Other notable mentions are enamel, non-stick, and ceramic, but were not included in the table as they refer to the coating only. Ceramic can withstand high heat but does fall short

KITCHEN BASICS

in its non-stick properties. Enamel coating on cast iron does help with the maintenance and allows cooking with acidic food without having to worry too much.

Handle attachment affects heat transfer from the pan to the handle. A lot of home cooks tend to buy pans with plastic handles, but they can be hazardous when cooking with open fire and cannot be used in ovens. Handles with similar material, albeit less heat conductive as the pan is preferred. Common attachments include riveting and welding. Riveted attachments tend to be sturdy and reduce heat transfer compared to welded ones which produces a smoother finish and have less food build up. One piece pans are seamless and often ergonomic, but do transfer more heat to the handles compared to the other types.

Below are some common pans and pots, as well as some of their usual properties.

	Fry Pan	ø 14-32 cm ø 5-14"	For searing as it allows steam to escape for browning.
	Sauce Pan	ø 16-22 cm ø 6-9" (1.2-2.5L)	Heating liquids as straight edge prevents quick evaporation.
	Sauté Pan	ø 14-32 cm ø 5-14"	For reducing liquids as it provides large surface area.
	Saucier	ø 17-24 cm ø 7-9.5" (1-2.8L)	For applications that needs whisking and stirring.
	Rondeau	ø 28 cm (h: 9.5 cm) ø 11" (h: 3.7")	Height is about 1/3 diameter. For shallow frying, searing, and braising.
	Stew Pot	ø 28 cm (h: 16.5 cm) ø 11" (h: 6.5")	Height is just over 1/2 diameter. For soups and stew.
	Stock Pot	ø 28 cm (h: 28 cm) ø 11" (h: 11")	Height is same as diameter. For simmering in a lot of liquid.
	Soup Pot	ø 22 cm (h: 27 cm) ø 8.7" (h: 10.6")	Taller than it is wide. For soups that requires little evaporation.
	Skillet	ø 15-50 cm ø 6-20"	Usually made from cast iron. For searing.
	Wok	ø 20-36 cm ø 8-14"	For active cooking such as stir fry.

KITCHEN BASICS

Bakeware selection can be very personalised based on what the individual intends to bake. Consider the types and sizes of the bakeware appropriate to the recipe and the final product. Here's a few common trays and pans.

Baking Tray

Roasting Tray and Rack

Round Cake Pan

Loaf Pan

Tart Pan

Baking/Casserole Dish

Muffin Tin

Pizza Stone

UTENSILS

Utensils are the tools to use along cookware and bakeware that will make tasks even easier. A few basic and useful utensils are highlighted below.

Lid

Wooden Spoons

Wok Spatulas

Ladle

Box Grater

Tongs

Mixing Bowls

Balloon Whisk

Silicone Spatula

Silicone Brush

Measuring Cup

Kitchen Scale

Kitchen Thermometer

Rolling Pin

Can Opener

Peeler

KITCHEN BASICS

Aluminium Foil/
Cling Film/ Baking
Paper

Bamboo Steamer

Square Grill Rack

Colander

KITCHEN APPLIANCES

Most people are familiar with common kitchen appliances and some of them, such as the refrigerator, which has become indispensable to the everyday person, not just for those who cook. Here's a few important and useful kitchen appliances.

Refrigerator

Stovetop

Oven

Kettle

Microwave

Rice Cooker

Blender/Food
Processor/Spice
Grinder

Sous Vide

TABLEWARE

Tableware can vary greatly among cultures and not always used at the table, but what is referred here all serve the same purpose - to eat. A few of the most widespread tableware are highlighted below.

Plate

Bowl

Glass, Mug and
Cup

Fork, Spoon, Knife
and Chopsticks

KITCHEN BASICS

SPACE ORGANISATION

Setting up the kitchen space in a way that helps the everyday cooking experience is crucial to the enjoyment of the person's cooking. There are a myriad of ways to organise a kitchen space, which will depend on the facilities and space available, personal preferences for certain type of cooking or cuisine, cookware, bakeware, utensils, ingredients and many other different factors. The aim here is just to point some basic principles that can assist anyone getting started.

Avoid cluttering the countertop, drawers, or cupboard with ingredients, utensils or anything else. Use racks, shelves, or other organising units where necessary to keep order in the kitchen space. Be cautious to not overdo it, and keep things simple. Having a clear countertop will allow more space for food preparation and organised drawers/cupboards will make items easier to locate.

A countertop with easy access to the sink and the stovetop is recommended. Food preparation generally requires some cleaning up, thus a sink nearby does help. Similarly the close proximity of the stovetop to the countertop gets from food preparation to cooking more efficiently.

The same concept applies to ingredients, cookware, and utensils. Keep a select handful of items that are used regularly near the preparation area, in nearby drawers, shelves, and cupboards. For example, ingredients such as oil and salt can be kept in the countertop area, near the stovetop but at a safe distance to avoid any open flame.

Overall, try to keep the kitchen organised in a way that is easy and efficient to cook. This will help make the cooking experience more enjoyable.

TECHNIQUES

KNIFE SKILLS

A fair amount of time spent when cooking involves cutting ingredients. Getting comfortable using a knife properly will make it quicker, safer, and more enjoyable to cook regularly. The two most important things to learn are to always use a sharp knife and make sure to stabilise the cutting board. A dull knife requires more force to use and increases the chance of accident happening, while not doing a great job at making the intended cuts. A sliding cutting board while using a knife will not do any good either. Some cutting boards come with non-slip rubber feet to help stabilise them, but most do not. Use either a damp cloth, a damp kitchen towel, or non-slip shelf liner cut to size to make sure the cutting board won't move around.

There are many ways to hold a knife, but most are either not comfortable and are quite dangerous. A great way to hold a knife, that is safe even with slightly damp hand is placing the middle finger behind the knife bolster or guard, with the ring and little finger around the handle, while pinching the blade with the thumb and forefinger. This is usually referred to as pinch grip.

The other hand is used to hold the ingredient being cut and one of the easiest and safe way to do that is to use the claw grip. Hold on to the ingredient with thumb and fingers, and keep fingertips curled inward to avoid getting hit by the knife's blade. The side of the latter

KITCHEN BASICS

should rest against the furthest knuckle and keep the blade perpendicular to the cutting board. The blade should not go higher than the guiding knuckle when cutting, regardless of the type of technique and size of ingredient used. The only few exceptions are when peeling, cutting some large vegetables to more manageable size, deboning meat, among some others.

Pinch Grip

Claw Grip

KITCHEN BASICS

CUTTING TECHNIQUES

Four different cutting techniques is illustrated in this section:

1. Slice. A common technique where food is cut lengthwise uniformly. The tip of the blade rest on the cutting board and the knife is angled upwards before slicing downward and forward into the food while keeping the tip of the blade in contact with the cutting board.

2. Chop. Similar to slicing but the whole blade is lifted up and cuts are made by downward and upward motion. It is not to be confused with the culinary cut: rough chop (pg.11), where food is cut into rough cubes that are similar in size.

3. Back Slice. Useful in making fine slices of herbs where other techniques can crush the ingredient instead of cutting. The tip of the blade is placed at an upward angle lower to the slicing technique and the knife is only pulled backward to make the cut.

4. Rock Chop. This technique is used to finely mince herbs, garlic, ginger and other similar ingredients. The tip of the knife is placed at one side of the ingredient and is held securely with the free hand and the knife is rocked up and down until the ingredient is minced to the desired size. Occasionally, the ingredients will need to be re-gathered.

KITCHEN BASICS

CULINARY CUTS

For the general home cook, it is not very important to know exact measurements of every culinary cuts, but it is useful to know at least some of the cuts to make uniform shapes and sizes in order to cook the ingredients as uniformly as possible - which in some case can make or break the dish.

Strip Cuts.

Fine Julienne	Julienne/ Allumette/ Matchstick	Batonnet	Pont Neuf/Thick Cut/Steak Cut
			
0.2 x 0.2 x 3-5 cm $\frac{1}{16} \times \frac{1}{16} \times 1-2"$	0.3 x 0.3 x 3-5 cm $\frac{1}{8} \times \frac{1}{8} \times 1-2"$	0.6 x 0.6 x 5-6 cm $\frac{1}{4} \times \frac{1}{4} \times 2-2.5"$	1 x 1 x 6-8 cm to 2 x 2 x 8 cm $\frac{1}{3} \times \frac{1}{3} \times 2\frac{1}{2}-3"$ to $\frac{3}{4} \times \frac{3}{4} \times 3"$

Cube Cuts.

Fine Brunoise	Brunoise/Fine Dice	Small Dice/ Macédoine	Medium Dice/ Parmentier	Large Dice/ Carré
				
0.2 cm $\frac{1}{16}"$	0.3 cm $\frac{1}{8}"$	0.5 cm $\frac{1}{4}"$	1.3 cm $\frac{1}{2}"$	2 cm $\frac{3}{4}"$

Other Cuts.

Rondelle	Rough Chop	Mince	Chiffonade
			
0.3-1.3 cm $\frac{1}{8}-\frac{1}{2}"$	0.3-0.6 cm $\frac{1}{8}-\frac{1}{4}"$	<0.2 cm < $\frac{1}{16}"$	Roll and slice evenly

KITCHEN BASICS

COOKING METHODS

There are numerous ways to cook food and which method(s) to choose will depend on ingredients being used, the final dish that needs to be achieved, the equipment available and personal preference. There are two main categories of cooking methods, including dry heat cooking and moist heat cooking. There are also cooking methods which combines the two and are referred to as combination cooking.

DRY HEAT COOKING

Stir Fry		Small amount of fat. Very high heat. Food stirred and tossed quickly.
Sauté		Small amount of fat. High heat. Food often left to brown to develop a fond.
Pan Fry		Very small amount of fat. Medium heat for even cooking.
Sweat		Small amount of fat. Low heat, often with added salt to draw moisture out without any browning.
Bain-marie/ Double Boiler		Simmering water in saucepan or pot and a bowl with the ingredient(s) on top. To melt or cook delicate ingredients.
Shallow Fry		Food is partly submerged in cooking fat and turned over during cooking to cook other side(s).
Deep Fry		Food is fully submerged in cooking fat until fully cooked.
Smoke		Food is exposed to smoke from smouldering material(s), usually wood or wood chips.
Bake/Roast		Indirect and evenly distributed heat around the food. Baking is usually done at a lower temperature compared to roasting.
Broil/Grill		Direct heat from either the top (broil) or bottom (grill) and food needs to be turned over to cook the other side(s).

KITCHEN BASICS

MOIST HEAT COOKING

Steam		Simmering water in a saucepan or pot and a steamer on top. Bamboo steamer absorbs moisture excess moisture while metal steamers do not.
Blanch		Food is boiled briefly and cooled down immediately into iced water or under cold running water to stop the cooking process.
Scald		The liquid is heated until small bubbles start to form (around 83°C for milk).
Poach		Food is cooked fully submerged in hot liquid, usually water (around 70-80°C).
Simmer		Food is cooked fully submerged in very hot liquid, usually water (around 85-95°C). Small and infrequent bubbles will appear.
Boil		Food is cooked fully submerged in very hot liquid, usually water (around 100°C). Large and very frequent bubbles will appear.
Steep/Infuse		The ingredient is soaked in liquid, usually water, to extract flavours or to soften the item. Infusion is the extraction into the liquid, often water, oil, or alcohol.

COMBINATION COOKING

Braise		Food is pan fried or sautéed at high temperature and then liquid up to 1/3 the height of the previous ingredients is added and cooked slowly.
Stew		Food may or may not be pan fried or sautéed at high temperature and then liquid fully covering the previous ingredients is added and cooked slowly.
Sous Vide		Food is vacuum-sealed and cooked in water at a constant temperature. Food such as steak require a quick sear after sous-vide.

KITCHEN BASICS

FOOD AND KITCHEN SAFETY

EQUIPMENT AND FIRE SAFETY

Knives can be dangerous if not used properly. As previously mentioned, it is important to use the best practices when handling knives, as the example shown on pg. 8-9. A firm grip on the handle, the helper hand in a claw grip and a stable cutting board can help prevent serious injuries. Even with the techniques shown, it is important to use caution when handling knives, as well as when using other tools or appliances with blades to limit any avoidable accident.

Utensils and appliances made out of glass or similar brittle materials should also be handled with a lot of care and in case of an accident, be sure to dispose the broken pieces in the safest way possible and the use of cut-resistant gloves is highly advisable in this case.

All electrical and electronic devices should be used as per specifications provided by the manufacturers. It is important to be extra cautious when using these appliances. There should never be any exposed wires, neither from the appliances nor from the wall sockets. Any faulty connections and exposed wires should be checked and repaired immediately by a professional. Electric appliances not in use should be switched off and unplugged if possible and if safe to do so. Electronic devices should have their batteries removed when not in use for extended period of time.

Using the most appropriate tools for the job not only make it easier but safer in most cases. For example, when taking a hot tray out of the oven, use either heat-resistant kitchen gloves, an oven rack puller, or both to make it as safe as possible. This is also applicable when handling other hot equipment in the kitchen and it is important to let other people nearby when moving around with them to ensure the safety of everybody.

Make sure to never leave the stovetop on unattended and make sure to keep away any materials that is likely to catch fire, especially with an open fire stovetop. Electric wires should also be at a safe distance from any exposed flames.

Despite taking all the necessary precautions, accidents can happen. Fire hazard, while less common than injuries such as cuts from knife, can still happen and can be way more dangerous. It is imperative that the kitchen is equipped with appropriate fire extinguisher(s).

Knowing how to use kitchen equipment properly and being responsible in general will help avoid unnecessary accidents. Be extra cautious when there children around and keep them at a safe distance from any potential danger such as sharp and/or hot objects.

PROPER FOOD SAFETY

Properly handling and preparing food is crucial to keep everybody safe. Before handling any food or equipment, hands should be washed thoroughly with soap and water to remove any dirt and other contaminants such as bacteria and viruses to avoid spreading diseases. The same applies after handling any ingredient that are highly likely to carry pathogens, such as poultry.

Food should be stored appropriately to help it stay fresher and edible to longer, as well as

KITCHEN BASICS

to avoid cross-contamination. For example, meat should be wrapped properly or put in sealed bag/containers to keep it from touching or leaking onto other food items in the refrigerator or freezer. In general, meat should not be kept:

- (i) at room temperature for more than 2 hours,
- (ii) in the refrigerator (at or below 4°C/39°F) for more than 5 days, and
- (iii) in the freezer (at or below -18°C/0°F) for more than 12 months.

Depending on the produce, these guidelines will vary greatly and it is important to read the package instructions and do some research in case there is none as it will be the case with fresh produce and meat from the butchery.

Vegetables, especially root variety often contains dirt and should be thoroughly washed with water. In case, a knife and/or a cutting board was used to break down the vegetable prior to washing, make sure to also wash the knife and cutting board to avoid cross-contamination. When cutting meat, it is recommended to use separate cutting board from the one used to cut vegetables.

After handling raw meat, wash and sanitise all equipment used in the process, as well as the surface used. Cooked meat should never get into contact with raw meat. In the fridge, different areas and shelves should be used to ensure there is no contact between cooked and raw meat. As previously mentioned, raw meat should always be packaged properly to avoid contact with other ingredient and prevent leakage. Cooked meat should also never be contact with any equipment that has been in contact with raw meat.

Meat from the freezer should be thawed properly before cooking. The outer part of the meat will warm up quicker than the inner most part and increases the chances of harmful pathogens growing on the surface. It is recommended to thaw meat in the refrigerator or in cold water. No matter what method of thawing used, meat should be cooked properly.

There is a whole spectrum of how much cooking an ingredient must be subjected to, in order to be considered safe for consumption. A lot of fruits and vegetables, as well as some meat and seafood can be eaten raw or needs very minimal heat applied to them to be edible. In contrast, poultry needs to be cooked thoroughly to be considered safe for eating.

Often when cooking, hot liquids such as water and oil are used. Put food slowly and carefully into pans and pots with hot liquids and make sure to used dry hands when using oil to avoid splashing. Do not leave anything cooking unattended and in case something starts to smell burnt, turn off the stove. After cooking, wait for the pans and pots to cool down before cleaning as handling them when they are still hot can cause injuries. In addition, applying cold tap water onto hot pots and pans can cause warping and some other damages.

GOOD CLEANING PRACTICES

Maintaining good hygienic practices in the kitchen will ensure a safer environment for cooking. Avoid keeping dirty dishes and utensils in the sink for long time and clean them properly after use. Wash with soapy water and rinse well before drying with a dishcloth. A dish rack can be used to put dishes and utensils for drying or after drying and should be regularly cleaned.

KITCHEN BASICS

The sponge used to wash dishes should also be cleaned after each use. Wash off any food residue from the sponge and replace it accordingly when appropriate. Dishcloth should also be kept clean and be washed on a regular basis.

The sink is often subjected to a lot of grease, dirt, and other food residue. It is crucial to clean and sanitise this area regularly, especially after preparing meat and meat products. The other surfaces used for preparation should also be cleaned properly and be sanitised to reduce cross-contamination.

A few extra steps in making sure that any equipment is used appropriately, knowing how to handle food properly and keeping a good hygiene in the kitchen will make it safe for cooking and eating. It is always better to prevent any accidents and illnesses rather than trying to remedy the situation. There are numerous other safety and precautions that were not mentioned in this section and the aim here was to give some general food and kitchen safety guidelines. Ask for guidance and do some more research when unsure of something, not just in the kitchen but in general.

Chapter 2

RECIPE

Part 1

VEGETABLES, FRUITS, AND SEEDS

TITLE

Description

YIELD: Servings PER SERVING | Energy: kCal | Carbohydrate: g | Protein: g | Fat: g

PART 1					
Whole Milk	1 L	4 cups	Sugar	50g or 1¾ oz	¼ cup

- 1 Heat melted butter, add milk, and bring to a boil.
- 2
- 3
- 4

NOTE For creamier texture, boil additionally.

VARIATIONS Add other flavours and experiment.

TUNA PASTA

Rich, creamy, and spicy tuna pasta

YIELD: 4 Servings PER SERVING | Energy: 638kCal | Carbohydrate: 74.0g | Protein: 30.2g | Fat: 21.3g

Tagliatelle	320g	3 cups	Parsley, chopped	2 tbsp
Tuna Flakes	170g	1 can	White Wine	125ml ½ cup
Olive Oil	45ml	3 tbsp	Tomato Purée	375ml 1½ cups
Garlic, minced		5 cloves	Sugar	12g 1 tbsp
Onion, diced		1 medium	Parmigiano Reggiano, grated	75g 1 cup
Thyme		2 sprigs	Lemon, squeezed	½ small
Tarragon		1 tsp	Salt	2 tbsp
Rosemary		1 sprig	Pepper, freshly ground	1 tbsp
Chilli Flakes		1 pinch		

- 1 Add 2 tbsp olive oil and tuna flakes in a **sauce pan** and cook on medium heat until golden brown.
- 2 Remove tuna from the heat and place on a dish or in a container.
- 3 Add 1 tbsp olive oil, onion, garlic, thyme, tarragon, rosemary, and chilli flakes in the **sauce pan**. Cook until the onions have softened.
- 4 Deglaze with white wine, let the alcohol cook out.
- 5 Add tomato purée, salt, sugar, and pepper. Cook for 15 minutes and add parmigiano reggiano.
Meanwhile, bring 8 cups of water to a boil in a **pot** and add 1 tbsp salt. Add tagliatelle to water and cook most of the way.
- 6 Add tuna from earlier to the **sauce pan**, mix, and cook for 1 minute.
- 7 Taste and adjust for salt and pepper.
- 8 Add the tagliatelle and some of the starchy water to the sauté pan, mix, and let the tagliatelle finish cooking in the sauce. Grate some parmigiano reggiano on top while cooking.
- 9 Garnish with parsley and more parmigiano reggiano before serving.

NOTE The sauce can be be ahead of time and heated before adding freshly cooked pasta. DO NOT cook pasta ahead of time.

VARIATIONS The type of pasta used for this recipe is tagliatelle, more specifically, nouilles fines. Experiment with other types of pasta!

ESSENTIAL PANTRY

ESSENTIAL PANTRY

This section aims to give an overview of most ingredients that are found in the recipes and may not include all varieties and types. Some information may vary depending on the region, types/varieties, and other factors. Information provided here is simply general and is only to be used as guideline.

MEAT, MEAT PRODUCTS AND SEAFOOD

MEAT

CHICKEN (*Gallus gallus domesticus*)

Origin: South-East Asia.

Storage:

At room temperature: <2 hours

Refrigerator (at or below 4°C/39°F): 1-3 days

Freezer (at or below -18°C/0°F):

Cooked/Ground/GIBLETS: 3 months

Chicken Parts: 9 months

Whole Chicken: 12 months

Safe Cooking Temperature: 74°C/165°F.

Flavour: Mild, savoury.

Pairings: Garlic, lemon, marjoram, thyme, tarragon, sage, rosemary.

Varieties:

Asiatic - Brahmas, Cochins, Langshans

American - Buckeye, Chanteclers, Delaware, Hollands, Javas, Jersey Giants, Wyandottes.

Continental - Barnvelders, Campines, Favorelles, Hamburgs, Houdans, Marans.

English - Australorps, Cornish, Dorkings, Orpingstons, Redcaps, Sussex.

Mediterranean - Ancona, Andalusians, Catalanas, Leghorns, Minorcas, Spanish.

Other - Araucana, Aseel, Cubalaya, Malay, Phoenix, Sultan, Sumatra, Yokohama.

Preparation: Cooked - bake, grill, steam, fry, boil.

Red Meat, poultry

Chicken, beef, pork, lamb, turkey,

MEAT PRODUCTS

Dairy products (milk, cheese - parmesan/cheddar/blue, yogurt, heavy cream, butter, clarified butter), eggs, broth/stock, honey, gelatin, rennet, caviar and roe, kamaboko and surimi (imitation crab and lobster meat) and tarama (salted carp roe), chorizo

ESSENTIAL PANTRY

SEAFOOD

Fresh and saltwater fish (Anchovy, bass, bluefish, carp, catfish, char, cod, flounder, haddock, halibut, herring, orange roughy, mahi-mahi, sardines, salmon, trout and tuna, sea-brim), crustaceans (Crab, crayfish, lobster, prawns and shrimp) and shellfish (Abalone, clams, conch, mussels, octopus, oysters, scallops, sea snails (escargot) and squid (calamari))

VEGETABLES

FLOWER

Cauliflower, broccoli, artichoke, caper, and loroco

LEAFY

Spinach, cabbage, lettuce, pal choy/bok choy, brussels sprouts, kale, chard, and watercress

TUBER

Potato, cassava, sweet potato, kumara, yam, taro, Jerusalem artichoke, and ulluco

POTATO (*Solanum tuberosum*)

Origin: Peruvian and Bolivian Andes.

Climate: Cool (15-20°C); plant in early spring and late fall.

Light: Full Sun Exposure.

Soil: Slightly acidic (5.0-7.0 pH), light, loose, and well-drained.

Edible: Tuber and shoot (must be cooked).

Storage: Dry and dark cool area.

Flavour: Pleasant savoury taste when cooked.

Pairings: Most herbs, garlic, cheese, onions, mushroom, olive oil.

Varieties:

All Purpose - Yukon Gold, Peruvian Blue, Kennebec, Red Gold, Purple Majesty, Katahdin.

Waxy - Fingerling, Yellow, Red, Russian Banana, La Soda, Round White, Rose Finn Apple.

Starchy - Russet, King Edward, Gold Rush, Vivaldi, Désirée, Maris Piper, Golden Wonder.

Preparation:

All Purpose - boil, steam, bake, deep-fry, sauté, roast.

Waxy - Boil and steam.

Starchy - Bake and mash but not boil.

ESSENTIAL PANTRY

SWEET POTATO (*Ipomoea batatas*)

Origin: Central and South America.

Climate: Warm (24°C); plant in spring. **Light:** Full Sun Exposure.

Soil: Slightly acidic (5.0-7.5 pH), light, loose, and well-drained.

Edible: Tuber and leaves. **Storage:** Dry and dark cool area.

Flavour: Mild, starchy, and sweet taste when cooked.

Pairings: Chili, cilantro, cinnamon, coconut, garlic, ginger, nutmeg, thyme, cloves.

Variants: Beauregard, Jewel, Garnet, Hannah, Okinawa, Satsuma-Imo.

Preparation: Cooked - Boil, steam, bake, roast, deep-fry.

ROOT

Carrot, radish, turnip, beet, horseradish, celery, turmeric, and parsnips

BULB

Onion - white/yellow/red, shallot, garlic, leek, spring onion, scallion, and fennel

STEM

Asparagus, celery, chard, fennel, fiddlehead, cardoon, and bamboo shoots

FRUIT

Squash - zucchini/kabocha/butternut, avocado, bitter melon, and capsicum/bell pepper

POD AND SEED

Peas, beans, lentils, okra, chickpea, peanut, soybean, and licorice

FUNGI

Button Mushroom, Enoki, Oyster, Shitake, Truffles, Portobello, Boletus, Chanterelles, Grifola Frondosa, Morchella, Shimeji, Straw Mushroom, Porcini, Morel

FRUITS

DRUPES

Peaches, cherries, apricots, mangoes, nectarines, plums, dates, olives, almonds, walnuts, coconuts, and cashews

BERRIES

ESSENTIAL PANTRY

Blueberries, gooseberries, cranberries, tomato, lingonberry, pomegranate, grapes/raisins, banana, kiwi

Aggregate: Strawberry, raspberry, blackberries

POMES

Apples, pears

CITRUS

Lemons/lemon zest, oranges, limes, bergamot, clementine, limes, kaffir lime, kumquats, pomelo, and yuzu

PEPO

Melons, large watermelons, tiny cucamelons, cucumbers, pumpkin, squash, and eggplant

TROPICAL

Bananas, pineapples, mangoes, papayas, and guavas, papaya and guanabana (soursop)

SEEDS

Referred to seeds directly: Sesame - white/black, sunflower, pumpkin

GRAINS

Wheat, rice, oats, cornmeal, barley, corn

GRAINS PRODUCTS

Bread, pasta, breakfast cereals, grits, and tortillas. Flour - all purpose/bread/buckwheat

PSEUDO-GRAINS

Amaranth, buckwheat, quinoa, wild rice, and kaniwa

LEGUMES

Lentils, peas, chickpeas, beans, soybeans, green beans and peanuts

NUTS

Almonds, Brazil nuts, cashew nuts, hazelnuts, macadamias, pecans, pine nuts, pistachios, and walnuts

HERBS AND SPICES

HERBS

ESSENTIAL PANTRY

Parsley, Mint, Dill, Basil, Sage, Rosemary, Thyme, Cilantro/Coriander, Fennel, Chamomile, Tarragon, Lavender, Chives, Bay Leaves, Culantro, Chervil, Winter Savory, Peppermint, Stevia, Lemongrass, Oregano, Marjoram, Lemon Balm, Myrtle, Lemon Verbena, Cicely, Spearmint, Spring onions, Fenugreek leaves

SPICES

(add SHU to chillies/peppers)

Cardamom pods - green, black (cao guo), Clove, Cassia Bark, Black/White Peppercorns, Celery Seed, Coriander Seed, Crushed Red Pepper, Cumin, Curry Powder, Nutmeg, Mace, Mustard Seeds, Garlic, Ginger, Turmeric, Fenugreek, Saffron, Allspice, Anise, Caraway Seed, Carom (Ajwain), Cayenne Pepper, Jalapeño, Chilli Pepper, Dried Chillies, Smoked Paprika, Fennel Seeds, Paprika, Sumac, Cinnamon, Onion Powder, Galangal Root Powder, Star Anise, Black Cumin, Poppy Seeds, Sichuan peppercorns, Bay Leaves, Kaffir Lime Leaves, Turmeric, Dried Black Lime, Asafoetida, Curry Leaves, Dried Mango Powder, Vanilla

CLOVES (*Syzygium aromaticum* or *Eugenia carophyllata*)

Origin: Moluccas (Indonesia)

Climate: Tropical with high humidity (above 15°C/ 60°F); plant in summer.

Light: Partial shade.

Soil: Moist, rich, well-drained.

Edible: Buds

Storage: In air-tight container for up to 1 year.

Flavour: pungent, warm, sharp, spicy, sweet.

Pairings: Apples, carrots, onions, almonds, beef, walnuts, cardamom, tamarind, vanilla.

Varieties: Penang, Zanzibar, Amboyan.

Preparation: Infuse flavour in curries, sauces, marinades, baked sweets.

ESSENTIAL PANTRY

OILS, VINEGAR, SEASONINGS AND ALCOHOLS

OILS

Flaxseed oil, Hemp seed oil, Butter, Extra-virgin olive oil, Coconut oil, Sesame oil, Vegetable, Shortening, Lard (Pork Fat), Duck Fat, Grapeseed oil, Canola oil, Vegetable oil, Margarine, Corn oil, Light, olive oil, Sunflower oil, Peanut oil, Clarified Butter (Ghee), Olive oil, Beef Tallow, Palm oil, Avocado oil

VINEGAR

Distilled white vinegar, apple cider vinegar, balsamic vinegar, white wine vinegar, red wine vinegar, rice wine vinegar, malt vinegar, red rice vinegar, champagne vinegar, sherry vinegar, black (Chinkiang) vinegar, cane vinegar, beer vinegar, raisin vinegar, apricot vinegar

SEASONINGS

Salt - sea salt/himalayan, pepper, sugar - white, brown/caster/icing/palm, honey, spice blends (masala, ras el hanout, shichimi togarashi, biryani, curry, garam masala), worcestershire sauce, soy sauce - light, dark, sweet, oyster sauce, sriracha sauce, mirin, fish sauce, chilli oil, hoisin sauce, doubanjiang, five spices, old bay seasoning, miso paste, sesame paste, sambal, belacan, tamarind paste, dijon mustard

SOY SAUCE (Soya Sauce or Shoyu)

Origin: China.

Storage: Cool dry area.

Flavour: Salty, umami.

Pairings: Rice, noodles, sushi, sashimi.

Varieties: Light, Dark, Mushroom-flavoured, Kecap Manis, Japanese Tamari.

Use: Added directly to food or be used as a dip or salt flavour.

ALCOHOLS

White wines (Sauvignon Blanc, White Bordeaux, Pinot Grigio, Sancerre, Dry Vermouth), red wines (Merlot, Côtes du Rhône Cabernet, Chianti, Pinot Noir, Zinfandels), rice wines (sake, Shaoxing), liqueur (Amaretto, Baileys Irish Cream, Campari, Cointreau, Frangelico, Kahlúa, St-Germain, Sambuca, Brandy), vermouth (Carpano Antica Formula Vermouth, Dolin Dry Vermouth, Noilly Prat Extra Dry Vermouth, Martini & Rossi Riserva Speciale Ambrato Vermouth, Cocchi Vermouth Di Torino, Martini & Rossi Extra Dry Vermouth, Carpano Punt E Mes, Ransom Dry Vermouth, Cinzano Rosso Sweet Vermouth, Martini & Rossi Rosso Sweet Vermouth), eau au de vie, beer.

ESSENTIAL PANTRY

BAKING AND MISCELLANEOUS

BAKING

Baking powder, yeast, baking soda, cornstarch, puff pastry, gelatin, cocoa - unsweetened/
dutch processed, espresso, almond flour, dark chocolate, semolina, tartaric acid

MISCELLANEOUS

Xanthum gum, breadcrumbs/panko, molasses, stocks - chicken/beef/lamb, bean sprouts,
coconut milk

APPENDIX

APPENDIX A - OIL

Type of oil/ fat	Saturated	Mono-unsaturated	Poly-unsaturated	Smoke point	Uses
Almond oil	8%	66%	26%	221°C/430°F	Bake, sauces, flavouring
Avocado oil	12%	74%	14%	271°C/520°F	Fry, sauté, dip, salad
Butter	66%	30%	4%	150°C/302°F	Cook, bake, condiment, sauces, flavouring
Ghee, clarified butter	65%	32%	3%	190-250°C/374-482°F	Deep-fry, sauté, condiment, flavouring
Canola oil	6%	62%	32%	204°C/399°F	Fry, bake, salad
Coconut oil (virgin)	92%	6%	2%	177°C/351°F	Candy, sweets, whipped toppings
Corn oil	13%	25%	62%	236°C/457°F	Fry, bake, salad, shortening, margarine
Cottonseed oil	24%	26%	50%	216°C/421°F	Shortening, salad, margarine
Flaxseed oil (linseed oil)	11%	21%	68%	107°C/225°F	Salad, nutritional supplement
Grapeseed oil	12%	17%	71%	204°C/399°F	Cook, salad, margarine
Hemp oil	9%	12%	79%	165°C/329°F	Cook, salad
Mustard oil	13%	60%	21%	254°C/489°F	Deep-fry, salad
Margarine, soft	20%	47%	33%	150-160°C/302-320°F	Cook, bake, condiment
Macadamia oil	12%	84%	4%	210°C/410°F	Deep-fry, salad
Olive oil (extra virgin)	14%	73%	11%	190°C/374°F	Cooking, salad, margarine
Olive oil (virgin)	14%	73%	11%	215°C/419°F	Cook, salad, margarine
Palm oil	52%	38%	10%	230°C/446°F	Cook, flavouring, shortening
Peanut oil	18%	49%	33%	231°C/448°F	Cook, salad, margarine
Pumpkin seed oil	8%	36%	57%	121°C/250°F	Salad
Rice bran oil	20%	47%	33%	254°C/489°F	Cook, salad
Sesame oil (unrefined)	14%	43%	43%	177°C/351°F	Cook
Sesame oil (semi-refined)	14%	43%	43%	232°C/450°F	Deep-fry
Soybean oil	15%	24%	61%	241°C/466°F	Cook, salad, margarine
Sunflower oil	10%	13%	77%	265°C/509°F	Cook, salad, margarine
Sunflower oil (linoleic)	11%	20%	69%	246°C/475°F	Cook, salad, margarine, shortening
Sunflower oil (high oleic)	9%	82%	9%	160°C/320°F	Cook
Walnut oil (semi-refined)	9%	23%	63%	204°C/399°F	Salad, cold dishes

APPENDIX B - FLOUR

Flour Type	Protein Content	Water Absorption
All Purpose Flour	11.7%	Moderate
Bread Flour	12.7%	High
Cake Flour	9.4%	Low
Caputo "00" Bread Flour	12.5%	Low

APPENDIX C - VOLUME AND WEIGHT CONVERSIONS

Volume Conversions							
Millilitres (ml)	Teaspoons (tsp)	Tablespoons (tbsp)	Metric Cups	US Fluid Ounces (fl oz)*	US Pints (pt)*	US Liquid Quarts (qt)*	US Liquid Gallons (gal)*
1	1/5	1/15	1/250	1/30	1/480	1/960	1/1920
5	1	1/3	1/50	1/6	1/96	1/192	1/768
15	3	1	1/17	1/2	1/32	1/64	1/256
30	6	2	1/8	1	1/16	1/32	1/128
125	25	8	1/2	4	1/4	1/8	1/32
250	50	17	1	8 1/2	1/2	1/4	1/16
500	100	33	2	17	1	1/2	1/8
1000 (1 litre)	200	67	4	34	2	1	1/4

* Some values have been rounded for ease of use. The most common variant of measurement is shown. Noteworthy mentions: Australian tablespoon is 20 ml, US cup is approximately 236.6 ml, US liquid pint is approximately 473.2 ml, US liquid gallon is approximately 3785.4 ml and Imperial fluid ounce is approximately 28.4 ml compared to US fluid ounce which is approximately 29.6 ml.

Weight Conversions						
Grams (g)	Ounces (oz)*	Pounds (lbs)*	Common Ingredients**	Dry Volume	Millilitres (ml)	Grams (g)
1	1/30	1/450	AP Flour	1 cup	250	120-130
10	1/3	1/45	Bread Flour	1 cup	250	120-145
15	1/2	1/32	Rice, uncooked	1 cup	250	200-210
30	1	1/16	White Sugar	1 cup	250	195-205
125	4 3/8	1/4	Brown Sugar	1 cup	250	210-220
250	8 7/8	1/2	Butter	1 cup	250	220-230
500	17 5/8	1 1/8	Yogurt	1 cup	250	220-250
1000 (1kg)	35 1/4	2 1/4	Cocoa Powder	1 tablespoon	15	5-7
1360*	48	3	Oil	1 tablespoon	15	12-14

* Some values have been rounded for ease of use. Ounce is approximately 28.4 g and pound is approximately 453.6 g.

** Use weight measurements whenever precision is required as dry volume is used for estimation only.

APPENDIX D - LENGTH CONVERSION

Formula to convert centimetres to inches: (Length in cm) / 2.54.
Formula to convert inches to centimetres: (Length in inches) x 2.54.

Centimetres (cm)	Inches (")		Centimetres (cm)	Inches (")
0.1	$\frac{3}{64}$		15.0	6
0.3	$\frac{1}{8}$		17.5	7
0.6	$\frac{1}{4}$		20.0	8
1.2	$\frac{1}{2}$		22.5	9
2.5	1		25	10
5.0	2		30.5	12 (1 foot)
10.0	4		61.0	2 feet (ft)

Values in inches have been rounded to the closest fraction.

APPENDIX E - TEMPERATURE CONVERSION

Formula to convert Celsius to Fahrenheit: (Temperature in °C x 9/5) + 32.
Formula to convert Fahrenheit to Celsius: (Temperature in °F x 5/9) - 32.

Gas Mark	Celsius (°C)	Fahrenheit (°F)
-	-18	0
-	0	32
-	35	95
-	70	158
-	100	212
1 - Very Cool	135	275
2 - Cool	150	302
3 - Warm	165	329
4 - Moderate	180	356
5 - Moderate	190	374
6 - Moderately Hot	200	392
7 - Hot	220	428
8 - Hot	230	446
9 - Hot	245	473
10 - Very Hot	260	500

APPENDIX F - PAN AND DISH SIZE

Volume	Pan or Dish Type	Dimensions in cm	Dimensions in inches	Pan or Dish Type	Dimensions in cm	Dimensions in inches
¼ - ½ cup (60 - 120 ml)	Muffin	7 x 3	2¾ x 1½	Muffin	7 x 4	2¾ x 1½
4 cups (1000 ml)	Round Square Loaf	15 x 5 20-23 x 4 20 x 20 x 5 20 x 10 x 6	6 x 2 8-9 x 1½ 8 x 8 x 2 8 x 4 x 2½	Rectangle Bundt Pie Dish	23 x 23 x 4 28 x 18 x 5 19 x 8 23 x 5 25 x 4	9 x 9 x 1½ 11 x 7 x 2 7½ x 3 9 x 2 10 x 1½
6 cups (1500 ml)	Round Square Bundt	20 x 5 23 x 4 20 x 20 x 4 19 x 8	8 x 2 9 x 1½ 8 x 8 x 1½ 7½ x 3	Loaf Muffin Cake Pan	22 x 11 x 6 Three 13 x 5 Two x 31 x 20 x 5	8½ x 4½ x 2½ Three 5 x 2 Two 3 x 1¼ 12 x 8 x 2
8 cups (2000 ml)	Round Square	23 x 5 20 x 20 x 5 23 x 23 x 4	9 x 2 8 x 8 x 2 9 x 9 x 1½	Loaf Baking Dish	23 x 13 x 8 28 x 18 x 4	9 x 5 x 3 11 x 7 x 1½
10 cups (2500 ml)	Round Square Rectangle	Two 20 x 5 23 x 23 x 5 28 x 18 x 5 33 x 23 x 5	Two 8 x 2 9 x 9 x 2 11 x 7 x 2 13 x 9 x 2	Springform Jellyroll Baking Pan	20-23 x 6 27 x 39 x 3 30 x 19 x 5	8-9 x 2½ 10½ x 15½ x 1 11¾ x 7½ x 2
12 cups (3000 ml)	Round Square Loaf Rectangle Tube	Two 23 x 5 25 x 25 x 5 20 x 10 x 6 33 x 23 x 5 23 x 8	Two 9 x 2 10 x 10 x 2 8 x 4 x 2½ 13 x 9 x 2 9 x 3	Springform Bundt Jellyroll Baking Pan	23 x 8 25 x 9 32 x 45 x 3 36 x 27 x 6	9 x 3 10 x 3½ 12½ x 17½ x 1 14 x 10½ x 2½
14 cups (3500 ml)	Round Square	Two 23 x 5 Two 20 x 5	Two 9 x 2 Two 8 x 2	Rectangle	33 x 23 x 5	13 x 9 x 2
16 cups (4000 ml)	Rectangle Springform	36 x 25 x 5 23 x 9	14 x 10 x 2 9 x 3½	Tube	25 x 10	10 x 4
18 cups (4500 ml)	Tube	28 x 13	11 x 5			

Some values have been rounded for ease of use. All measurements are estimates to help choose the correct pan or dish and may differ depending on the product.

APPENDIX G - SPECIFIC GRAVITY

Specific Gravity	Approximate Sugar Content (g)	Potential Alcohol (%)
1.040	390	5.1
1.080	760	10.6
1.100	980	13.4
1.120	1170	16.2
1.130	1280	17.5
1.140	1370	18.9

GLOSSARY

GLOSSARY

AL DENTE: Food (typically pasta) cooked until tender and still firm but not mushy.

BAIN-MARIE/DOUBLE BOILER: Food placed in a container in or above simmering water to gradually heat or keep the food warm.

BAKE: Food cooked in indirect and evenly distributed heat.

BASTING: Moisten food (typically meat) periodically by pouring pan drippings or other liquid fat while cooking.

BATONNET: Cut food into long strips.

BLANCH: Food boiled briefly and cooled down immediately into iced water or under cold running water to stop the cooking process.

BLOOM: Yeast added to water or milk to test if it is still alive. Foam will appear if the yeast is alive and ready to use. Fresh and instant yeast do not require this step.

BOIL: Food cooked fully submerged in very hot liquid, usually water (around 100°C/212°F). Large and very frequent bubbles will appear.

BRAISE: Food is pan fried or sautéed at high temperature and then liquid up to 1/3 the height of the previous ingredients is added and cooked slowly.

BRINE: Soak food in a solution of salt and water.

BROAST: Food, usually chicken, cooked with condiments in a pressure fryer.

BROIL: Food cooked from direct heat applied from the top.

BROWNING: Food cooked on high heat to create a flavourful crust which is usually brown in colour.

BRUNOISE: Cut food into very small cubes.

BUNCH: About 1 to 2 cups, typically used to refer to the amount of herbs or other ingredients. Precise measurement is usually not required and amount used is dependent on personal preferences.

CANNING: Food preservation method where the food is processed and sealed in an airtight container such as jars and cans.

CARAMELISE: Sugar heated at high temperature to remove excess water and produce a sweet, nutty, and buttery flavour which is golden to dark brown in colour.

CARRÉ: Cut food into large cubes.

CLARIFY: Removing impurities from a liquid, usually from butter or stocks.

CHIFFONADE: Roll ingredients, usually leafy

greens and herbs, and cut into strips.

CHOP: Cutting technique where cuts are made in a downward and upward motion.

CONCASSÉ: To rough chop. Tomato concassé is done by first scoring and boiling, then peeling and de-seeding, and lastly chopping.

CONFIT: Food cooked in a liquid, usually fat or syrup at low temperature.

CONSOMMÉ: A soup or both that has been clarified, typically with egg whites to produce a clear liquid.

CREAMING: 1. Blending ingredients, typically solid fat such as butter and shortening, with other ingredients. 2. Creamed food by poaching in milk, cream, or other "creamed" food substitute such as liquid "milk" from mashed corn kernels for creamed corn. 3. In milk where the cream rises to the top of un-homogenised milk.

CURDLING: Separating an emulsion into its large composition, usually in milk large chunks form the curds leaving behind the liquid called whey.

CURING: Food preservation method which is usually done by either brining, smoking or salting.

DASH: Small amount of liquid, typically less than 1/8th of a teaspoon.

DEEP FRY: Food is fully submerged in cooking fat until fully cooked.

DEGLAZING: Liquid added to a hot pan to remove and dissolve the fond, used to flavour sauces and soups.

DICE: Cut food into cubes. See BRUNOISE, CARRÉ, MACÉDOINE and PARMENTIER.

DOUBLE BOILER: See BAIN-MARIE.

DREDGE: Coat food with dry ingredient(s) such as flour, breadcrumbs, or cornmeal before cooking.

EGG WASH: Beaten egg(s), whole or yolk, sometimes mixed with water or milk, brushed on pastry before baking.

EMULSIFY: Combining two substances that usually do not mix well into a homogeneous and uniform suspension. For example oil and water do not mix well but can be combined by breaking the oil into tiny droplets that can remain suspended in water.

EN PAPILLOTE: Food baked inside a folded pouch or parcel.

FERMENTATION: The process of converting carbohydrates to alcohol using microorganisms such as yeast and bacteria.

GLOSSARY

FILLET: A portion of meat or fish with the bones removed.

FILLING/STUFFING: Edible mixture, typically vegetables, breadcrumbs and butter, placed inside the cavity of another food item, such as pepper and chicken, before cooking.

FLAMBÉ: Alcohol poured over food and ignited. Fire is brief and the flamed alcohol leaves its subtle flavour without the flavour of alcohol.

FOAM: Gelling or stabilising agent in which air is suspended to make a light and fluffy edible mass, such as meringue, whipped cream and mousse.

FOLD: Gently combine light and airy ingredient with heavier ingredient without causing deflation.

FOND: Residue left from browning.

FRICASSÉE: Stew made from pieces of meat, usually chicken, veal, or rabbit, that have been browned in butter and served with a sauce flavoured with the cooking stock

FROSTING/ICING: 1. Sweet glaze made of sugar and water or milk, sometimes enriched with other ingredients such as butter and egg whites, used to decorate or coat baked goods, such as cake, cookies, and doughnuts. 2. The act of apply the frosting on the baked goods.

FRUIT PRESERVES: Fruit preserved using sugar and sometimes acid, stored in glass containers to be used as condiment or spread.

GARNISH: Item(s), usually salad, herbs, or other foods, added to a dish to enhance appearance and/or taste.

GLAZING: 1. Flavourful coating on food that gives a glossy appearance and can be a result of basting. 2. Substantial coating to cover food, such as covering a doughnut with chocolate. 3. The act of adding egg wash on baked goods before baking.

GRATIN: Food topped with a browned crust, using breadcrumbs, grated cheese, egg or butter, and often baked or cooked under the broiler.

GRILL: Food cooked from direct heat applied from the bottom and usually food needs to be turned over to cook the other side(s).

ICING: See FROSTING.

INFUSE: Extraction of a food's flavour into a liquid, often water, oil, or alcohol.

JULIENNE/MATCHSTICK: Cut food into thin long strips.

MACÉDOINE/SMALL DICE: Cut food into small cubes.

MACERATION: The process of softening or

breaking food, usually raw, dried, or preserved fruits or vegetables, by soaking into a liquid. Also used for letting the food absorb the flavours of the liquid.

MATCHSTICK: See JULIENNE.

MINCE: Cut food very finely.

PAN FRY: Food cooked over medium heat for even cooking.

PAR BAKE: Bread or dough product such as short-crust pastry baked to about 80% of the normal cooking time.

PAR BOIL: Partially boiling food in water. Food is not fully cooked and cooking is finished by another method. Similar to blanch but does not need the chilling part.

PARMENTIER/MEDIUM DICE: Cut food into medium cubes.

PASTEURISATION: Treatment of food with mild heat, usually to less than 100°C/212°F to kill pathogens and extend the food's shelf life.

pH: A measure of how acidic or basic a liquid is. The scale is usually between 0 to 14, where 7 is neutral.

PINCH: Small amount of dry ingredient, typically less than 1/8th of a teaspoon.

POACH: Food is cooked fully submerged in hot liquid, usually water (around 70-80°C/158-176°F).

PONT NEUF/STEAK CUT: Cut food into thick long strips.

PRESSURE COOK: Food cooked in a sealed container, usually called a pressure cooker, where air and liquid cannot escape below a predefined pressure. Water and other cooking liquids are generally used for cooking.

PRESSURE FRY: Similar to PRESSURE COOK. Oil is used instead of water and other cooking liquids, and food is deep fried in the sealed container. This method is widely used in the preparation of fried chicken commercially.

PROOFING/PROVING: Yeast activation and fermentation in the dough that causes the dough to expand and rise. The term can refer to any stage of fermentation: blooming, second rise, or final rise.

PROVING: See PROOFING.

PURÉE: Cooked food that has been grounded, blended, or sieved to a creamy texture.

REDUCTION: Thickening of a liquid mixture, usually a soup, sauce, wine, or juice by simmering or boiling to intensify its flavour.

GLOSSARY

RENDER: Hard animal fat melted and clarified for other cooking applications.

RICING: Food is pushed or pressured through a food mill or a ricer to produce a smooth texture, coarser than a purée or passing through a sieve or tamis but smoother than mashing.

ROAST: Same as baking but temperature is usually higher.

RONDELLE: Cut food into round thin slices.

ROUGH CHOP: Cut food into uneven pieces.

ROUX: Flour and fat cooked together used to thicken sauces.

SALTING: Food preservation method which uses salt, either dry or in a solution to make a brine.

SAUTÉ: Food cooked over high heat and left to brown and develop a fond.

SCALD: Liquid heated until small bubbles start to form (around 83°C/181°F for milk).

SCORE: Shallow cuts made on the surface of meat, fish, bread, or cakes. In meat and fish, this helps better absorption of marinades and in bread and cakes, for air to escape to avoid steam trapped inside to blow up and for decoration.

SEAR: Exposing food to high heat to form a brown flavourful crust.

SEASONING: Enhancing the flavour of food by adding salt, spices and herbs.

SHALLOW FRY: Food cooked partly submerged in cooking fat and turned over during cooking to cook other side(s).

SHUCK: Removal of the outer casing of food, such as the husk of an ear of corn or the shell of an oyster.

SIMMER: Food is cooked fully submerged in very hot liquid, usually water (around 85-95°C). Small and infrequent bubbles will appear.

SKIM: To remove impurities from the surface of a liquid, such as a stock or jam, while it is cooking.

SLICE: 1. Food cut lengthwise uniformly. 2. Cutting technique where the tip of the blade rests on the cutting board and cuts are made in the forward and downward motion.

SMOKE: Food cooked by exposing to smoke from smouldering material(s), usually wood or wood chips.

SOUS-VIDE: Food is vacuum-sealed and cooked in water at a constant temperature. Food such as steak require a quick sear after sous-vide.

SPATCHCOCK: Split and open a bird, usually a chicken, by removing the backbone to flatten it before cooking.

SPHERIFICATION: Liquid shaped into squishy spheres by using sodium alginate and either calcium chloride or calcium lactate gluconate. Spheres resembles fish roe both in appearance and texture.

STEAK CUT: See PONT NEUF.

STEAMING: Food cooked in steam by placing a container with openings over simmering or boiling water.

STEEP: Ingredient is soaked in liquid, usually water, to extract flavours or to soften the item.

STEW: Food may or may not be pan fried or sautéed at high temperature and then liquid fully covering the previous ingredients is added and cooked slowly.

STIR FRY: Food cooked over very high heat and is stirred and tossed quickly.

STUFFING: See FILLING.

SUPRÊME: Term used for the best part of an ingredient. For example, chicken suprême refers to skin on, boneless chicken breast.

SWEAT: Food cooked over low heat, often with added salt to draw moisture out without any browning.

TANDOOR: Cylindrical clay or metal oven used for cooking and baking.

TEMPER: 1. Two liquids brought to similar temperature before combining them completely, such as tempering egg to prevent it from cooking before adding to a hot sauce. 2. Heating and cooling chocolate to stabilise and give it a smooth and glossy finish. 3. Spices and other aromatics briefly fried in oil and ghee to release their flavour and aroma to be used for cooking or as garnish.

TENDERISE: To make food easier to chew.

THICKEN: Make the liquid or mixture denser by adding other ingredient, such as flour and cornstarch, or by reducing it to the desired viscosity.

ZEST: Outer layer of citrus fruits used as flavouring.
